

IPC J-STD-001 Certification Kit with Lead Free Option

Soldering workmanship kits are required for certification training under the J-STD-001 Certification and Training Program for both CIT (Trainers) and CIS (Operators). This STI kit is available in Lead Free as well as Tin Lead versions. The components are representative of those commonly experienced in today's industry. Since this kit has been used for

skill training over the years it's a very useful resource for transition of skill to Lead Free, allowing the student to experience "what's different". The kit is packaged with enough components to populate the two boards that are provided. This allows skill development using one board and final assessment with the other. Individual parts and boards are available as well as the kit form.

Part List

Part	Quantity
J-STD-001 board	2
1/4 Watt Axial	4
T05 transistor	4
Transistor Standoff	4
Diode Axial	4
CK06 Cap	4
Cap Standoff	4
16 pin DIP	4
0805 Resistor	4
1206 Resistor	4
1206 Cap	4
1206 MELF Diode	4
SOIC 14	2
QFP 100	2
PLCC 20	2
